

PLEXIGLASS CLEANING PROCEDURES

STEP 1

PLEXIGLASS CLEANING PRODUCTS:

Clear Image Aerosol
Clear Image Concentrate
Clear Image RTU
Green Earth® Glass Cleaner

STEP 2

Recommend the use of proper PPE with all cleaning chemicals. This includes the minimum use of gloves and safety glasses.

STEP 3

Clean using Betco® non-ammoniated glass cleaner of your choice. Plexiglass is sensitive to ammonia, high pH, and products with Quaternary ammonium salts that will cause clouding or fogging. Apply cleaner directly to surface and wipe clean and dry with a clean microfiber cloth.

ALTERNATIVE METHOD

ALTERNATIVE METHOD TO CLEAN AND DISINFECT:

Use GE Fight Bac™ RTU (EPA List N) to clean, disinfect, and deodorize plexiglass without harming the surface. Just a 5 minute dwell time required for disinfection!
